I feel like giving up

I was feeling really good until a few months ago. I was walking just about every day and even began Couch to 5k. First I got shin splints really bad and had to stop running and most walking. They healed; I started up again with high hopes; then my knee swelled up and I have constant back and hip pain. I also have chronic shoulder pain. Great. It seems like all of my efforts to get fit have only hurt my physical condition more. The harder I try, the worse my health gets. It's very hard to continue wondering what my next injury will be. I want to make myself stronger, not weaker!

Pounds lost: 0

Cookie Monster

Worried, depressed, upset

Okay...I am pressing the panic button:) I am about 150 lbs overweight. Last year I was diagnosed with Type 2 diabetes. Got that under control with Metformin and healthy eating most of the time. A1C was 6.5 last time. So, I go to the dr. last week to get a refill for my Meformin and he decides to check my blood pressure and it's 140/85!!! Too high! So, now I have to monitor it for 2 weeks and go back. I feel like crying...if it's not one thing it's another. I am worried, upset, and depressed about this.

- impression management

emotional support
accountability & motivation
advice
impression management

emotional support

Online health communities valued over in-person: support any time of the day or night.

"[If] I am going through a rough patch, and I post it up, I can see **immediately** someone respond."

P3

emotional support

Connect with people who have been in the same situation

"... and just some of the people that I am friends with, they have not had that journey, so they don't quite understand"

P8

Trust that this can happen on OHCs vs. fear of "sarcastic," "negative," or uninformed responses on Facebook.

emotional support

Strategies for what to put on Facebook vs. OHCs:

• don't post struggles to Facebook "I didn't want everybody on Facebook knowing that my butt muscle hurt today."

P6

• frame messages differently for each community e.g., details about frustrations to OHCs, brief updates to Facebook.

emotional support
accountability & motivation
advice
impression management

accountability preferences varied

"[My SparkFriends] were checking on me to make sure everything's okay. None of us wants each other to fall of the ladder. They all want me to be successful and stay fit."

P7

"... they're strangers, and so you don't know that you're going to see them the next day... so accountability doesn't quite work because you don't know the people."

P8, who recruited friends to her blog.

motivation

Role models, mentors, competitions were easier to identify or create in OHCs.

Need to avoid people who would bring them down, but the sense that others were there and struggling too – so long as they continued trying – also offered motivation.

Posts to Facebook as "nudging" others.

emotional support
accountability & motivation
advice
impression management

advice

Particularly important early in the process – e.g., shortly after diagnosis.

Advice/information-seeking often brought people to the online health community, but rarely why they kept coming back.

Need to share (& join) in order to get better advice.

emotional support
accountability & motivation
advice
impression management

impression management | Facebook as front stage

"like a standup comedy routine"

P2

"I have had people send me a private message of 'wow, your life is so great! You know you do this, this, and this and all these fun things happen' And I tend to think 'you know, you're only seeing what I want you to see.' ... It's not that I don't have problems, I'm just not putting them on Facebook."

impression management | Facebook as front stage

"I kind of like to 'out' my running ability now... I really like to talk about my running on Facebook, because I'm so darn proud of it...

"They're just so surprised I'm running and they'll say like 'fantastic' and 'when are you going to run?' And so yeah, I'm getting the feedback I want. I'm finally getting... some positive feelings from those people that I couldn't get back in high school."

impression management | Facebook as front stage

"There are some people I wouldn't care about if they saw [posts I might make about my health on Facebook] but I got people, you know, from my high school and that I am friends with that I haven't talked to in 25 years. And I have no desire for them to know about my weight issues or weight status."

P9

impression management | OHCs as back stage

Can let guard down, share frustrations and struggles (and need to in order to get support and advice on this) without fear of judgment or boring others.

findings
building and shaping the network to help meet goals

building and shaping the network

Join OHCs to not feel alone, find people who can motivate and offer needed support.

... this requires sharing.

"My page was never private... to me, if I'm new, I'm not going to have friends – because I don't know anybody. And if I'm new and I'm private on top of that, my chances of having friends is low."

building and shaping the network

Sometimes migrate OHC friends to Facebook.

- feel more connected
- increases accountability

Also could stay connected to OHCs through Facebook pages.

How can existing social network sites help?

What are the opportunities associated with Facebook?

- Advice and support relevant to *your* context and personality
- People whose opinions matter
 - for accountability
 - for showing off success & communicating identity

Using health & wellness applications as experiment sites, what can I learn about theories of influence?

- 10 out of 12 shared at least once, but...
 - shared with only an empty support group

still limited by fears of violating norms, revealing weaknesses, or appearing boring or boastful.

3 configured a support group

SHARING AS A NUDGE

Receive:

- emotional support
- accountability & motivation
- advice
- impression management

But face challenges with:

- building, shaping, and selectively accessing one's network
- risk of violating norms
- managing impression while meeting health needs

Just completed a 8.12 mi run with RunKeeper

Duration 1:10:46 | Calories Burned 1281

Average Pace 8:43 / mi | Average Speed 6.88 mph | Elevation Climb 544 ft

🟂 Like - Comment - Track your fitness - 38 minutes ago via RunKeeper - 🎎

for fear of violating norms, revealing weaknesses, or appearing boring or boastful.

for fear of violating norms, revealing weaknesses, or appearing boring or boastful. "Mostly when I make things private, it's more because I think they'd be boring or insignificant to my friends, not because they're actually things I wouldn't want my friends to know about. I just don't want to clog up their Facebook with it.... A lot of the people I'm friends with wince about having games and other non-status update things all over their pages. And so I don't want to get winced about."

- 3GT participant

for fear of violating norms, revealing weaknesses, or appearing boring or boastful.

"It's just kind of embarrassing to me... I jogged for 20 minutes today, let me tell 200 people, many of which I haven't talked to in years ... Who cares?... I don't want to share with someone that I, you know, they comment on it, oh yeah I ran a marathon, good to go 20 minute runner guy."

- GoalPost participant 12

GOALPOST USER:

I'm really depressed. If Facebook can't save me, I don't know what will help me lose weight.

RESEARCHER:

Did you think Facebook was going to help?

GOALPOST USER:

I thought it was going to save me, yeah.

RESEARCHER:

Did it?

GOALPOST USER: No. And I'm so discouraged.

BUT WANTING SOMETHING SOCIAL

of the 55 active 3GT participants... **24** invited friends **25** looked at friend profiles

of 4188 3GT pageviews... 660 were of a friends' Good Things

1 of 12 GoalPost users found a new exercise partner & started going to the gym more.

BUT WANTING SOMETHING SOCIAL

"I got a TON of comments.... Lots of people said they liked that, and they responded to that and congratulated me... so yeah, people do definitely comment on them when they are created from Facebook and publicized [in newsfeeds]."

BUT WANTING SOMETHING SOCIAL

"It would have been cool to have somebody reacting to, like you said, the sort of social interaction over the content of the posts that I've done... To have some of these things – "oh, I see you posted something", or just some reaction. Because sometimes it feels like you're out there, putting stuff out in the world and you're not getting any feedback, you know?"

- 3GT Participant

Because she's **accepting** and she wouldn't get sick of my posts. When we were talking about this and choosing a support group, all I could think of was that *Farmville* thing where I'm always seeing that someone has a cow. **That is so annoying.** I didn't want to annoy another person.

GoalPost | sharing: support group

... my friend liked my post, my *GoalPost*, and that made me feel good that she was at least looking at it.

She was **the only one** out of my whole support group that looked at it.... I only got responses from my one friend that was here locally, even though I told [my support group] about it.

So I was kind of bummed. I was disappointed in my friends... it'd be really awesome if you could, you know, support me or help me do that when I post things. Nobody cared.
